**Other Studies:** No data available.

## Section 12 - Ecological Information

**Ecotoxicity:** Fish: Fathead Minnow: 18.3 g/L; 96 Hr.; Unspecified Estimated Koc range = 45-75. These values indicate that saccharin will be highly mobile in soil and may leach into the ground water. Estimated BCF values = 0.46 and 0.75. These values suggest that this product should not bioconcentrat among aquatic organisms. Saccharin exist primarily in the particulate phase in the ambient atmospere and may be removed by dry and/or wet deposition. If it is released into the atmosphere as a gas it will react with photochemically produced hydroxyl radicals with a half-life of 6.5 days.

**Environmental:** No information available.

**Physical:** No information available.

**Other:** No information available.

## Section 13 - Disposal Considerations

Chemical waste generators must determine whether a discarded chemical is classified as a hazardous waste. US EPA guidelines for the classification determination are listed in 40 CFR Parts 261.3. Additionally, waste generators must consult state and local hazardous waste regulations to ensure complete and accurate classification.
